

BA 097 Fuel Tank Guard DI2 Fitting Instructions

- 1 Firstly remove one of the front tank mounting nuts, fit the bracket and replace the nut. Then repeat for the other side. Fitting the brackets one by one ensures the tank does not fall whilst fitting.
- 2 Bolt the rear brackets to the towing eye hole in the chassis. It may be necessary to open out the holes slightly.
- 3 Finally fix the aluminium guard to the brackets and tighten all fixings.
