

BA 147S Discovery Lamp Guards Fitting Instructions.

Upper Lamps.

- 1 Remove the screws that hold the lamp in place.
- 2 Fit the lamp guards using the longer screws and the spacers provided. The spacers should fit between the lamp guard and the lamp.

Lower (Bumper) Lamps.

- 1 Remove the lower lamp unit out of the bumper. They are held in place by spring clips on the sides of the lamp unit. They can be seen when you look on the inside of the bumper.
- 2 Offer up the lamp guard to the lamp and decide which is left and right and which is top and bottom. You will notice that the guard follows the shape of the lens better one way than the other. Then slide the lamp guard over the lamp and secure using the small screws provided. A small pilot hole may need to be drilled first.
- 3 Re fit the lamp and lamp guard assembly into the bumper.

Upper Lamps.

Lower Lamps.
